

Addressing the Roots

Re-thinking the approach to type 2 diabetes management and the role of dual GIP/GLP-1 receptor agonism

LEARNING OBJECTIVES

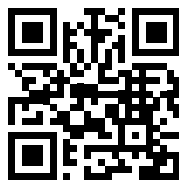

At the conclusion of this program, participants will be better able to:

- Discuss the role of adiposopathy in the pathophysiology of type 2 diabetes (T2D)
- Explain the incretin pathway and how it can be modulated for therapeutic benefit in T2D
- Describe the clinical trial evidence supporting dual GIP/GLP-1 receptor agonism in T2D
